

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Description

Mode d'emploi

- 1. Choix de la ligne: définissez l'âge du rentier.
- 2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
- 3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 55 ans

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableur vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. **Ces tables sont donc des tables générationnelles.**

Mode d'emploi

- 1. Choix de la ligne: définissez l'âge du rentier.
- 2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
- 3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 57 ans													
Hommes							Femmes

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 58 ans

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

- 1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Table with columns: Age, Hommes (0.5%, 0.8%, 1.0%, 1.5%, 2.0%, 3.0%), Femmes (0.5%, 0.8%, 1.0%, 1.5%, 2.0%, 3.0%), and Age. Includes a note at the bottom: 'Taux d'intérêt net auquel le capital pourra être placé'.

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Taux d'intérêt net auquel le capital pourra être placé													

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arriérés sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 62 ans

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 65 ans

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 66 ans

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.
Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. **Ces tables sont donc des tables générationnelles.**

Description

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 67 ans

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 69 ans

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 70 ans

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 71 ans

Taux d'intérêt net auquel le capital pourra être placé

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 72 ans

Taux d'intérêt net auquel le capital pourra être placé													

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. **Ces tables sont donc des tables générationnelles.**

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 73 ans

Taux d'intérêt net auquel le capital pourra être placé													

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

6. Valeur actuelle d'une rente viagère temporaire de 1 euro par an payable annuellement

Ce tableau vous permet de convertir en capital une rente viagère temporaire versée annuellement jusqu'à l'âge défini en haut de chaque table. Les coefficients de conversion sont calculés selon la méthode de la rente actuarielle, c'est-à-dire en supposant que les versements des différents arrérages sont conditionnés à la survie du bénéficiaire.

Description

Les tables Schryvers utilisent des probabilités de survie dites prospectives. Ces tables, contrairement aux tables stationnaires, anticipent l'évolution future de la mortalité en tenant compte de l'évolution des quotients de mortalité de chaque génération observés dans le passé. Ces tables sont donc des tables générationnelles.

Mode d'emploi

1. Choix de la ligne: définissez l'âge du rentier.
2. Choix de la colonne: définissez le taux d'intérêt net annuel auquel le capital pourra être placé.
3. Multipliez le coefficient par le montant de la rente.

Age au terme de la carrière professionnelle: 75 ans
